## Projects

**Friend Finder | Git | Deployed**

- By using node and express, create a website which takes in users names and photos allowing them to take a survey. By using body parser, surveys are

-

matched based on the answers provided thus finding friends with similar interests.

- I developed this project full by myself i was responsible for frontend and backend development
- Node, Express, Body Parser, Bootstrap, Html, Javascript, JSON

#### **Dat-a-Pet-2 | Git | Deployed**

- Group 3 Project 3, Developed an app that takes in pet user medical information and is able to be shared with others.
- Mainly responsible for front end development but was not limited to collaborating with back end group members and helping them solve problems they ran into.
- React, SQL, and Materialize css, Express

#### **Bamazon | Git | Deployed**

- Created a application that has its own server. This allows a place to hold and create data that you have watched or would want to watch in the future.
- Developed the application by myself i was responsible for all the applications functionality.
- Using Node Express and Handlebars, Mysql
